**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Fresh westerly winds and a slight wind chill in the cold airstream.

Forecast for Wednesday 24 Nov 2021

Weather: Dry overnight but a period of rain around dawn with some heavier bursts for a time. Falling as snow above 700m. This band of precipitation marks the change to a very cold, airstream moving across from the north. Any low cloud will mostly clear around dawn with bright spells and a few showers, wintry above 600m for the rest of the day.

Maximum wind: Southwesterly 20-25mph with gusts 35mph initially becoming northwesterly 15-20mph with gusts 30mph during the afternoon.

Chance of cloud free mountain/hill tops above 700m: 70%, some low cloud in association with showers which may group together.

Visibility: Periods of low cloud to 600m in the north and west, although if showers clump together there may be longer spells of poor visibility in wintry showers. It will be a very blustery day especially around snow showers. Further east, fewer showers are likely and these will be lighter but visibility still turning moderate or poor for a time and cloud bases falling to 700m.

Temperature: **Valleys:** Plus 6 falling to 3 Celsius. It will be warmer in the early morning on Wednesday and temperatures will gradually fall during the day as cold air pushes south.
At 700m: Plus 2 falling to Minus 1 Celsius.
Freezing level: 900m falling to 600m.
